

# NAME =PRACHI DNYANDEV JADHAV

## PRN =24030332905018

1) Create a set and display its elements

```
In [1]: my_set = {1, 2, 3, 4, 5}
print("Elements of the
set:") for element in
my_set:
    print(element)
```

```
Elements of the
set: 1
2
3
4
5
```

2) Add an element to a set

```
In [4]: my_set = {"apple", "banana",
"cherry"} my_set.add("orange")
print(my_set)
```

```
{'apple', 'orange', 'cherry', 'banana'}
```

3) Remove an element from a set

```
In [6]: fruits = {"apple", "banana",
"cherry"} fruits.remove("banana")
print(fruits)
```

```
{'apple', 'cherry'}
```

4) Clear all elements from a set

```
In [11]: my_set = {1, 2, 3, 4}
my_set.clear()
print( my_set)
```

```
set()
```

5) Copy a set to another set

```
In [12]: original = {1, 2, 3}
duplicate = original.copy()
print(duplicate)
```

{1, 2, 3}

6) Check if an element exists in a set

```
In [15]: my_set = {"apple", "banana", "cherry"}

if "banana" in my_set:
    print("'banana' is in the set.")
else:
    print("Not found.")
```

'banana' is in the set.

7) Find the length of a set

```
In [2]: my_set = {"apple", "banana",
"cherry"} print(len(my_set))
```

3

8) Iterate through a set using a loop

```
In [3]: my_set = {"apple", "banana",
"cherry"} iterator = iter(my_set)
for element in iterator:
    print(element)
```

apple  
banan  
a  
cherr  
y

## Set Operations

9) Find the union of two sets

```
In [2]: set1 = {1, 2, 3}
set2 = {3, 4, 5}

union_set = set1.union(set2)
print("Union of two sets:",
union_set)
```

Union of two sets: {1, 2, 3, 4, 5}

10) Find the intersection of two sets

```
In [4]: set1 = {1, 2, 3}
        set2 = {2, 3, 4}

        intersection_set = set1.intersection(set2)
        print("Intersection of two sets:", intersection_set)
```

Intersection of two sets: {2, 3}

11) Find the difference between two sets

```
In [6]: set1 = {1, 2, 3, 4}
        set2 = {3, 4, 5, 6}

        difference_set = set1.difference(set2)
        print("Difference between two sets:",
              difference_set)
```

Difference between two sets: {1, 2}

12) Find the symmetric difference between two sets

```
set1 = {1, 2, 3, 4} set2 = {3, 4, 5, 6} sym_diff = set1.symmetric_difference(set2) print("Symmetric
Difference:", sym_diff)
```

13) Check if one set is a subset of another

```
In [16]: A = {1, 2, 3}
        B = {1, 2, 3, 4, 5}
        if A.issubset(B):
            print("A is a subset of B")
        elif B.issubset(A):
            print("B is a subset of A ")
        else:
            print("A is not a subset of B and also B is not a subset of A")
```

A is a subset of B

14) Check if one set is a superset of another

```
In [20]: A = {1, 2, 3, 4, 5}
        B = {1, 2, 3}
        if A.issuperset(B):
            print("A is a superset of
B") elif B.issuperset(A):
            print("B is a superset of A ")
        else:
            print("A is not a superset of B and also B is not a superset of
A")
```

A is a superset of B

15) Check if two sets are disjoint

```
In [21]: A = {1, 2, 3}
B = {4, 5, 6}
if A.isdisjoint(B):
    print("A and B are disjoint
sets") else:
    print("A and B are not disjoint sets")
```

A and B are disjoint sets

## Set Applications

16) Remove duplicates from a list using a set

```
In [22]: my_list = [1, 2, 2, 3, 4, 4, 5]
unique_set = set(my_list)
unique_list = list(unique_set)
print("Original list:", my_list)
print("List after removing duplicates:", unique_list)
```

Original list: [1, 2, 2, 3, 4, 4, 5]

List after removing duplicates: [1, 2, 3, 4, 5]

17) Convert a list to a set and back to a list

```
In [23]: my_list = [1, 2, 2, 3, 4, 4, 5]
my_set = set(my_list)
new_list = list(my_set)
print("Original list:", my_list)
print("After converting to set and back to list:", new_list)
```

Original list: [1, 2, 2, 3, 4, 4, 5]

After converting to set and back to list: [1, 2, 3, 4, 5]

18) Find common elements in two lists using sets

```
In [24]: list1 = [1, 2, 3, 4, 5]
list2 = [4, 5, 6, 7, 8]
set1 = set(list1)
set2 = set(list2)
common_elements = set1.intersection(set2)
common_list = list(common_elements)
print("Common elements:",
common_list)
```

Common elements: [4, 5]

19) Get elements in one list but not in another using sets

```
In [25]: list1 = [1, 2, 3, 4, 5]
list2 = [4, 5, 6, 7]
set1 = set(list1)
set2 = set(list2)
difference = set1.difference(set2)
result = list(difference)
print("Elements in list1 but not in list2:", result)
```

Elements in list1 but not in list2: [1, 2, 3]

20) Use set comprehension to generate a set (e.g., squares or primes)

```
In [26]: squares = {x**2 for x in range(1, 11)}
print("Squares from 1 to 10:", squares)
```

Squares from 1 to 10: {64, 1, 4, 36, 100, 9, 16, 49, 81, 25}

## Frozen Set Programs

21) Create and print a frozenset

```
In [27]: fset = frozenset([1, 2, 3, 4, 5])
print("Frozenset:", fset)
```

Frozenset: frozenset({1, 2, 3, 4, 5})
